## ■ Code list for FI report and possible combinations

An important principle that SELMA reporting institutes must follow in reporting their data to the Riksbank is that a complete set of series keys, that have amount larger than zero (0), always is reported, see the list of possible combinations below.

Reporting of series which are not in the lists of possible combinations should never occur. Please note that the lists below only contain the information to build the series key. In practical reporting also trade date and the actual amount (in SEK millions) value needs to be included in the reporting file.
